

CALL FOR CONTRIBUTIONS

Automotive Platform Meeting

at

Konica Minolta Business Solutions Deutschland GmbH

February 13th /14th, 2019

Scope

New Automotive Displays

-

Methods of Testing | Non-Conventional Design

The Background | Key Aspects

Unlike the term „Industrial“ with its great number of different and in some respect even contradictory specifications, the topic „Automotive“ suggests a homogeneous field of application and moreover makes us associate pictures of dash boards, GPS or entertainment systems. But automotive reality is going to transcend the well-known. Within the span of a couple of years there shall be no more need for a driver with unshared concentration upon the road ahead and instruments in front of her or him.

This requires very sophisticated display technologies with a high degree of visibility and reliability. “Non-rectangular” or curved display shapes are designed into automotive environments. Which technologies are most suited for these applications? How do we secure quality?

These are the topics, we want to talk about.

What are we interested in?

We are inviting you to contribute with a presentation highlighting one or more of the above-mentioned aspects. We very much enjoy sharing your experience, your research and/or your brainstorming.

The meeting site

is located in **Europaallee 17, D-30855 Langenhagen (5-6 km from Hannover airport)**

Call for contributions

I would like to encourage you all **to present** your ideas and knowledge in the above fields. Of course you may also suggest additional and related **topics and external speakers**. However, by presenting your own paper you will create a very special opportunity to visualize your expertise.

Please let us know that you are interested in presenting until January 20, 2019 - or earlier. We shall contact the speakers for copies of their presentations later.
