

# CALL FOR CONTRIBUTIONS

**For Automotive Platform Meeting at  
EuropTec GmbH Display Glass Europe, Goslar, Germany**

**Nov 27/Nov 28, 2019**

**Scope: Automotive Displays**

Glass in Automotive Applications

Two decades ago the windshield was the car driver's window to the world outside. She or he is still obliged to diligently observe the road, but meanwhile a lot of information is delivered to the driver's attention through HUD or displays. The other way round, communication with the car is enabled by touch sensitive surfaces. From the windshield to the touch display, glass elements or surfaces play an essential role in modern car concepts.

Glass in automotive applications must follow various safety requirements, functional specs and last, but not least, esthetic criteria. Flat or curved, strengthened, edged and/or with functional layers on it, glass is a multifunctional material with a wide spread field of application.

**Call for contributions** I would like to encourage you all **to present** your ideas and knowledge in the above fields. Of course you may also suggest additional and related **topics and external speakers**. However, by presenting your own paper you will create a very special opportunity to visualize your expertise.

**Please let us know that you are interested in presenting until Nov 4, 2019 - or earlier.** We shall contact the speakers for copies of their presentations later.

## **Contact**
