test.displayforum.de

In cooperation with **Burosch Audio-Video-Technik**, the **German Flat Panel Display Forum (DFF)** offers you free test patterns to optimize the set-up of your display.

Content

At <http://test.displayforum.de> you will find a set of eight test pictures to adjust your displays performance together with the corresponding manuals.

For high resolution displays like TVs, one manual includes seven test patterns to optimize the overscan, brightness, contrast, colour and sharpness of your display.

The second one - AVEC Audio Video Equipment Check - includes a test pattern for the set-up of all other kinds of displays with other screen resolutions and aspect ratios.

How to start

To start the settings, download the pictures from our website or start the CD and display them on the display you want to optimize. Please notice that it might be necessary to transfer the data to your display, e.g. via USB device or a PC.
